PhD in Botany

## Why study plants?

- Plants have long been linked with human existence.
- Play major role in every aspect of human life;
- From production of vital oxygen, food source, fuel production, discovery of natural products for medicines, adding aesthetic value etc.
- With such diverse applications, the research & study of plants remain critical and necessary.
- Botany is the scientific study of plant physiology, cell biology, molecular biology, genetics, ecology & evolution.
- Applied plant research include the study of plant pathogens, biofuels, pharmaceutical discoveries, or any area that focuses on plants & its environment for human application.
